

# Exotic-fruit and climate change

## Wildobstführung im Neuenheimer Feld - Wildedibles-Tour of the Uni-Campus

17.10 - 17 Uhr

Apple, Pear, Cherry, Plum, eehm,... maybe also quince, medlar or fig but beside that, not a lot of fruit grows in local gardens.

Exotic fruits are by their very name exotic and therefore you may only find them on your holidays or in the supermarket.

Hardly anybody may know how many opportunities our local gardens provide due to climate change and modern horticulture.

Bitter orange, abaca, pawpaw, cornelian cherry, mini-kiwis, Japanese dogwood, pomegranates, whitty pear, windmill palm, loquat, cathay quince, juneberries, chokeberries, hawthorn, lotus plums, oleaster and paper mulberries are only a few of the fruit varieties we can harvest in the Neunheimer Feld during the year.

In every season we can find some fruit trees flowering or with ripe or unripe fruits. Some of them taste dull and bland, but others guarantee unforgettable taste experiences. Some look more inconspicuous and others seem to come from a horror movie.

And who knows, maybe some of us will find her or his new personal favorite fruit.

**The tour is available in english language.**

**Thursday, 17.10 - 17 Uhr - main entrance of the Zentralmensa**

**Eine Veranstaltung im Rahmen des Projekts „Auf den Spuren des Klimawandels“ von Ökostadt Rhein-Neckar ([www.klimaprojekt.oekostadt.org](http://www.klimaprojekt.oekostadt.org))**

**mit organisatorischer Unterstützung  
des Ökoreferats des StuRa Heidelberg und von Transition Town Heidelberg**
